Effective back pressures may be held either by regulating the fluid level or by controlling the gas pressure in the casing. 16. Constant back pressures can not be held on the oil sand unless the well pumps steadily and fast enough to keep the fluid down near the perforations in the tubing anchor. Minimum back pressures on wells can be assured either by predetermined fluid levels or by the regulation of gas pressure at the casing heads, but as soon as the fluid begins to head up in a well the pressure on the oil sand becomes greater than the minimum pressure. 17. Wells produce casing-head gas at a faster rate when they are pumping, and when the fluid is pumped down, than when they are shut down and there is a column of fluid in the hole. The fluid column that builds...
