Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Evolution and Natural Theology The Theory of the Evolution of Living Beings, more familiarly known as the Theory of the Origin of Species, has continued to attract an increasing amount of public attention, ever since 1859, when Darwin published his great work on the subject. Although the principle of Evolution was not new, yet the crude and unscientific speculations of the earlier Evolutionists had failed to produce any deep or permanent impression on either the scientific or the popular mind; and it was left for Darwin and Wallace to promulgate a theory which could be seen to be both scientifically probable, and easily intelligible, and capable of accounting for a great number of familiar facts which had previously been regarded as lying almost beyond the domain of science, and therefore as incapable of explanation.
